Connecting iPhone, iPad, and iPod Touch Manually

YUWireless supports the 802.11a/b/g/n wireless standards and requires WPA/WPA2-Enterprise security. This document provides the settings needed to configure an iPhone/iPad/iPod touch. If you have trouble please connect to YUSetup and click ‘Connect Me to YUWireless’ to run the auto configuration wizard, or contact ITS/Academic Computing:

Before you begin:

• This document assumes that you are using a client, which is running a current OS with up to date patches, firmware, drivers and web browser.

• This document assumes that you know your network username and password, and that you have administrator access to your device.
**Step by step:**

1. From the home screen, select **Settings**.
2. From **Settings**, select **WiFi**.
3. From **Wi-Fi Networks**
   - Name: **YUWireless (case sensitive)**
   - Security: **WPA2 Enterprise**
   - Username: `<your network username>`
   - Password: `<your network password>`
4. Click **Join**
5. When prompted, click **Accept** for the Certificate from UTNUSERFirst-Hardware

Your iPhone/iPad/iPod Touch should now be connected to YUWireless.
